F.Y.I. – Flood plains at the OB/OD units near the Tanana River are a real issue, not just a theoretical concern.

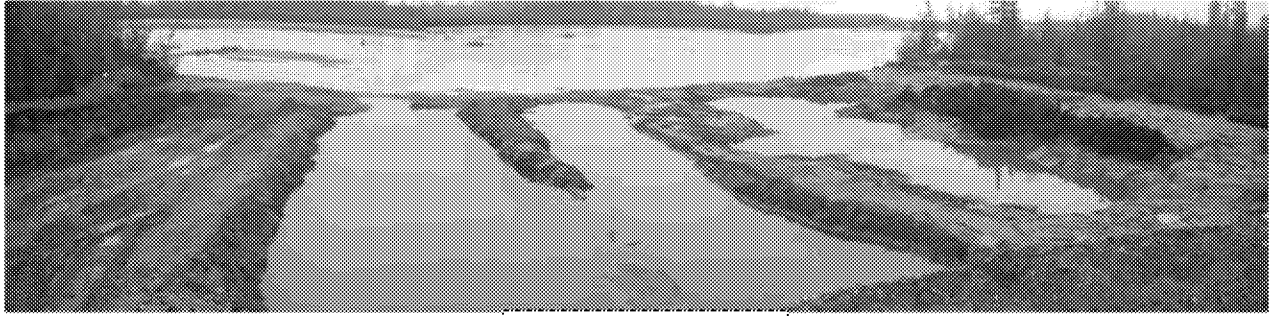

Harry

The latest updates from Fort Wainwright Tanana River site removal. I haven't read through them all but it doesn't sound like they're encountering loads of MEC/MPPEH.

I cropped out a photo from the July 4 report - flooding is becoming an issue at the site. Its my recollection the left riverbank (in this pic) is where the shells were eroding out of the bank. Hope they've not been scoured and redistributed downstream.

Subject: Daily's

To All:

You will find the next set of Daily's ending July 4, 2016.

The crew has found additional .50 caliber shells, bringing the total to 9 and one-half buckets. The Baltimore Team is up to 238,820 Lbs. of MDAS and still have not recovered any more MEC items since the June 12 discovery. Rain continues to hamper the production process, and the river has risen to within a few inches of the crest of the site bank.

Thank you for your continued support for this effort.

Brian Adams  
Project Manager, Fort Wainwright Restoration Program
